Print Book & E-Book. ISBN 9780444892652, 9780080934303 - Thu, 23 Apr 1992 23:53:00 GMT **Application of Continued Fractions in Controlling Bank fraud** Continued Fractions with Applications, Volume 3 (Studies ... by **L. W. CONTINUED FRACTIONS - Mathematics** Chapter 3 deals with the expansion of irrational numbers into infinite continued fractions, and includes an introductory discussion of the idea of limits. Here one sees how continued fractions can be used to give better and better rational approximations to irrational numbers. These and later results are closely connected with and **An Application of Fibonacci Sequence on Continued Fractions** Lemma 2.3 ([2], Theorem 3.7) The continued fraction map $T(x) = f_1 x + g$ on $(0;1)$ is ergodic with respect to the Gauss measure : Proof of Lemma 2.1. We have a ... Continued fractions with applications, Vol. 3 of Studies in Computational Mathematics. North-Holland Publishing Co., Amsterdam, 1992. **The Topsy-Turvy World of Continued Fractions** [online] Chapter 47 The Topsy-Turvy World of Continued Fractions [online] The other night, from cares exempt, I slept—and what d’you think I dreamt? I dreamt that somehow I had come, To dwell in Topsy-Turveydom!— **Continued fractions - IMJ-PRG** which is the solution x of the equation $2x = 3$, is irrational. Powers of 2 which are close to powers of 3 correspond to rational approximations a/b to $\log_2 3$: $\log_2 3 \approx a/b$, $2a \approx 3b$. $27/80$ Approximating $\log_2 3$ by rational numbers Hence it is natural to consider the continued fraction expansion $\log_2 3 = 1.58496250072\dots = [1, 1, 1, 2, 2, 3, 1, \dots]$ **Continued Fractions - pi.math.cornell.edu** (namely by Euclid’s algorithm). But is it the only way of getting a simple continued fraction? In this section and the next few sections we will see that there is essentially a unique way to write a rational number as a simple continued fraction. Theorem 2.3. If x is representable by a simple continued fraction with an odd (even) number **Curious Continued Fractions, Nonlinear Recurrences ...** 2 Journal of Integer Sequences, Vol. 18 (2015), 3 6 1 47 Curious Continued Fractions, Nonlinear Recurrences, and Transcendental Numbers Andrew Hone School of Mathematics, Statistics and Actuarial Science University of Kent Canterbury CT2 7NF United Kingdom A.N.W.Hone@kent.ac.uk Abstract
